

Using the SELEKT™ fluid-therapy and clinical-nutrition formulae: a guide

The Selekt formulae are intended for delivery into the rumen, using a Selekt cattle pump and drenching set.

1. In cases of mild dehydration, use one sachet of Selekt Fresh Cow 500, Selekt Off Feed or Selekt Restore in 20 litres of warm water. In cases of moderate dehydration, use an additional sachet, of Selekt Restore, in an additional 20 litres. In cases of severe dehydration, use two additional sachets, of Selekt Restore, in an additional 40 litres. Never use two sachets of Selekt Fresh Cow 500 or Selekt Off Feed and never use the two products together. **These products provide a full dose of 108 g of calcium: no additional calcium is required.**
2. To reduce excess acid in the rumen, one sachet of Selekt Antacid should be used in 20 litres of warm water.
3. Selekt Glycerol Plus contributes no solute, and may therefore be given in any volume of water, or used alone as a drench for animals that are not dehydrated. It may also be used in combination with solutions of one sachet of Selekt Restore per 20 litres of water.

	Selekt Antacid	Selekt Charbon Fluide	Selekt Fresh Cow 500	Selekt Glycerol Plus	Selekt Off Feed	Selekt Restore
Excess acid in the rumen	✓					
Following Caesarian section			✓	✓		
Rehydration						✓
For an adsorbent effect in the gut, with rehydration		✓				✓
Inappetance in early lactation					✓	
Reduction in the risk of ketosis				✓		
Ketosis recuperation				✓		✓ if dehydrated
Following correction of left displacement of the abomasum					✓	✓
Reduction in the risk of milk fever / hypocalcaemia and ketosis			✓
